

WORLD TRUCKING ELD

Operating Manual

Version 1.2

Mobile Application

Go to the app distribution platform compatible with your operating system. Download and install the logbook app on a device with a data plan. The app will use data to receive and send RODS data.

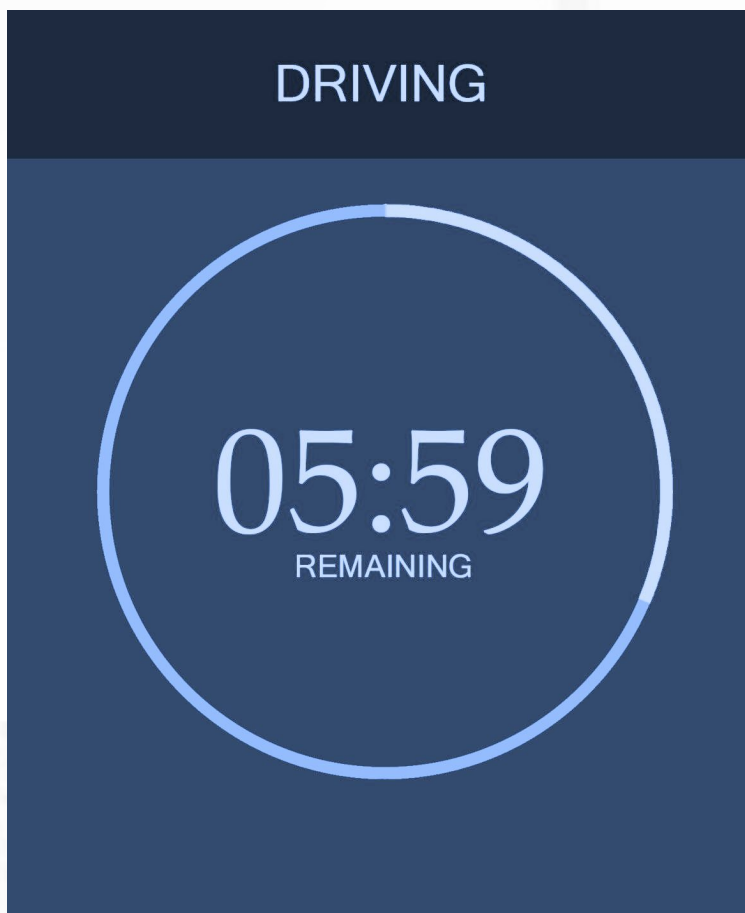

DUTY STATUS

Driving time will be automatically recorded from the moment the ELD is connected.

The status will be set to Driving whenever the vehicle moves at 5 mph or more.

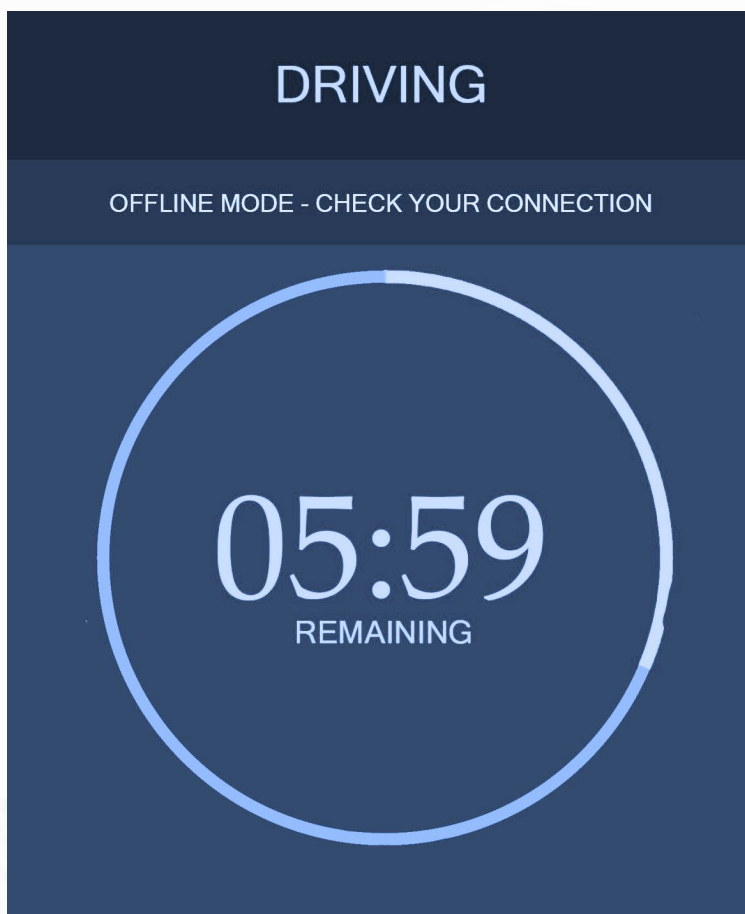

Your current status is shown inside the Status Circle.

App features are not available during driving to avoid distractions.

OFFLINE RODS

Whenever you lose cell connectivity temporarily, the app will operate in offline mode. If this happens, a notification will appear on your screen. The system will continue recording hours of service through the loss of signal.

The device uses an internet connection—WiFi or cellular—to transfer recorded data to the ELD service provider's server. However, a stable connection is necessary for this transfer to take place successfully.

FEATURES

Records of Duty Status

Available Hours and Required Breaks

Inter-and Intrastate HOS Rules

Roadside Inspection Function

Vehicle Inspection Reports
