Getting Started

Installing the ELD Device

In order to install the ELD device (PT-40/ IOSiX) simply connect it to the diagnostics port of your vehicle using the appropriate connector provided with the device.

Installing the Keep Tracking ELD App

In order to install the app simply search Keep Tracking ELD on Google Play or scan the QR code on the back of the manual.

To start using the app, use the login credentials received via email or from your motor carrier. If you did not receive these login credentials, please contact your motor carrier.

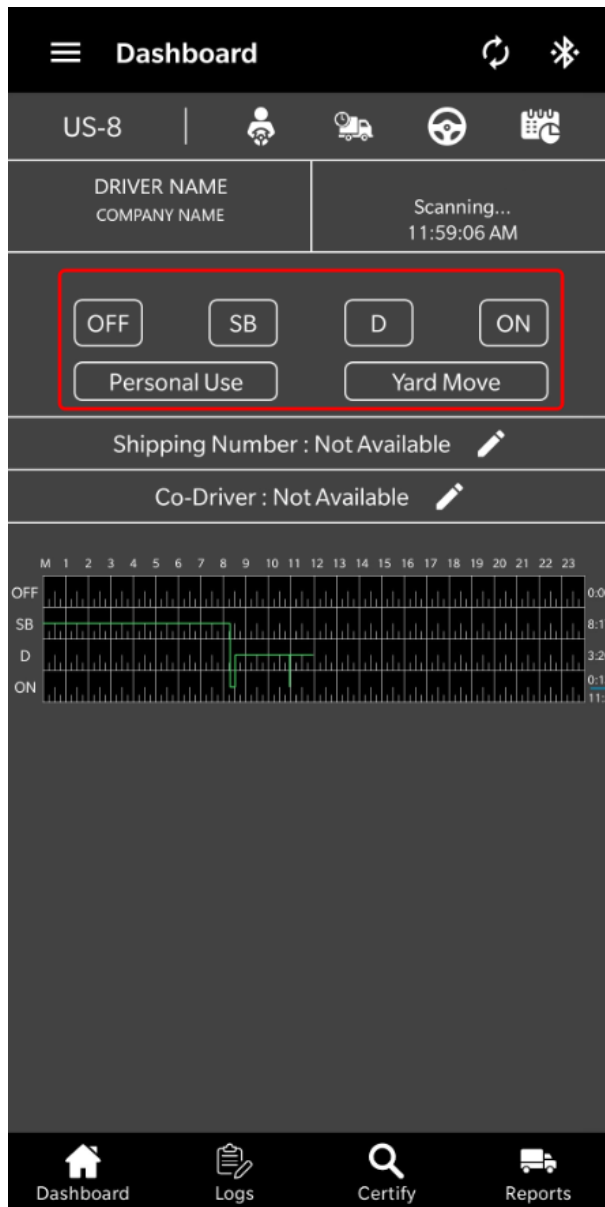

If prompted, please allow the app to use location in the background.

Managing HOS

Recording HOS

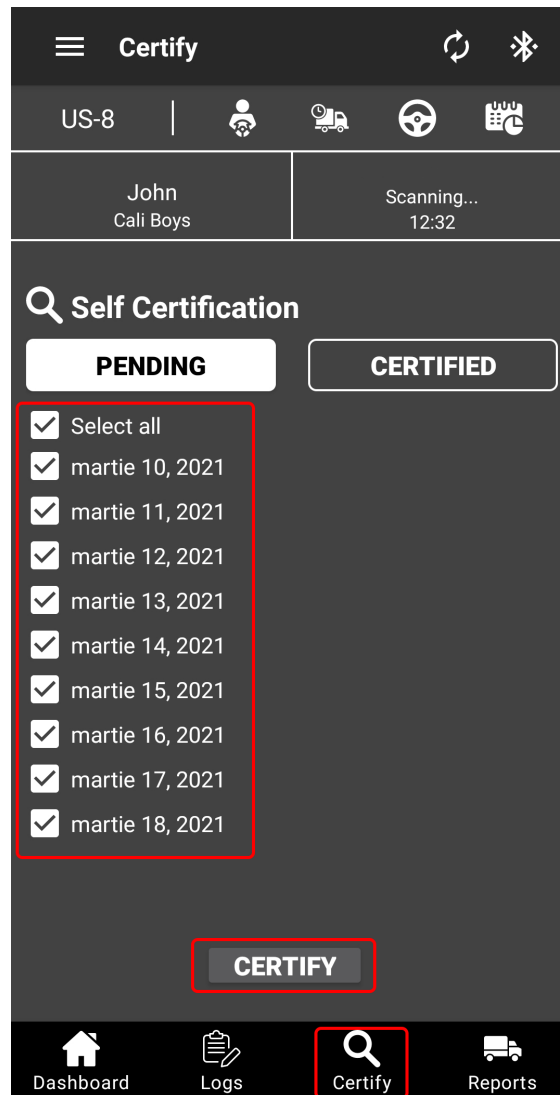

From the Dashboard of the app tap on the duty status you intend to switch to.

If you start driving the device and application will detect this and automatically switch your status to drive.

Certifying HOS

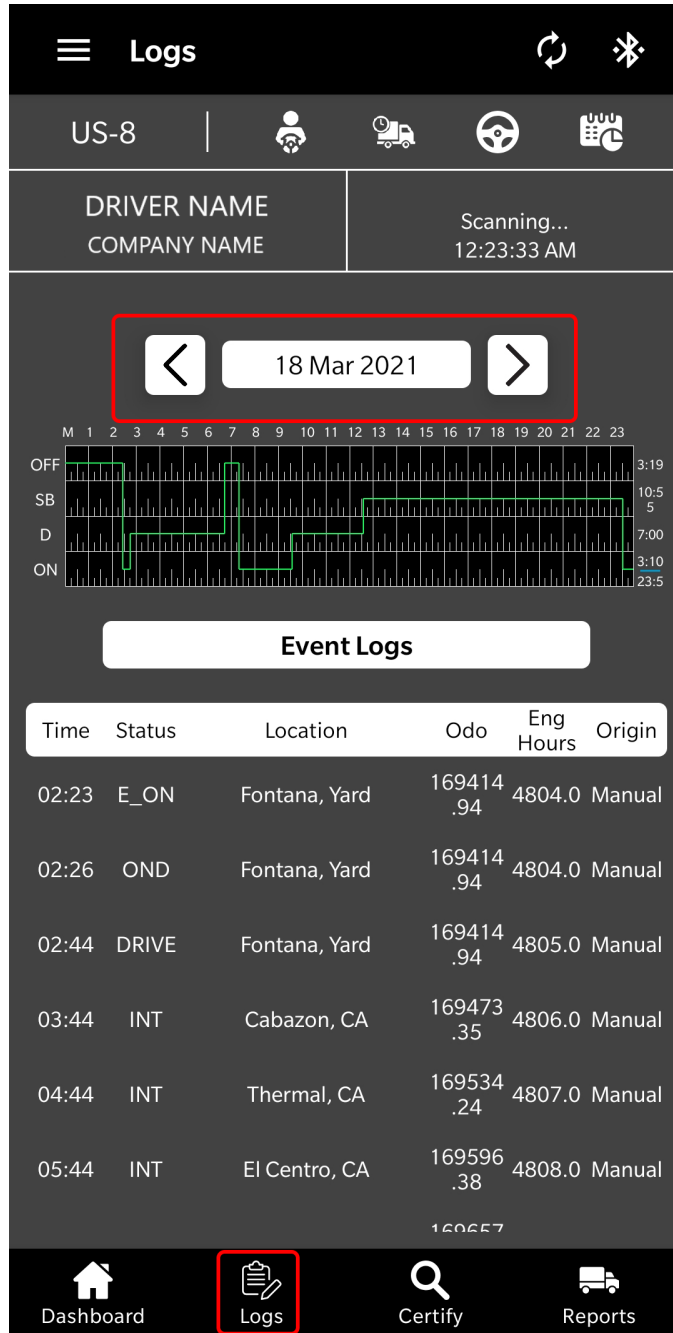

In order to certify your HOS, navigate to the certification page by clicking the **Certify** button at the bottom of your screen. Afterwards select the days you would like to certify from the pending list, then click the CERTIFY button located below the list.

Viewing HOS

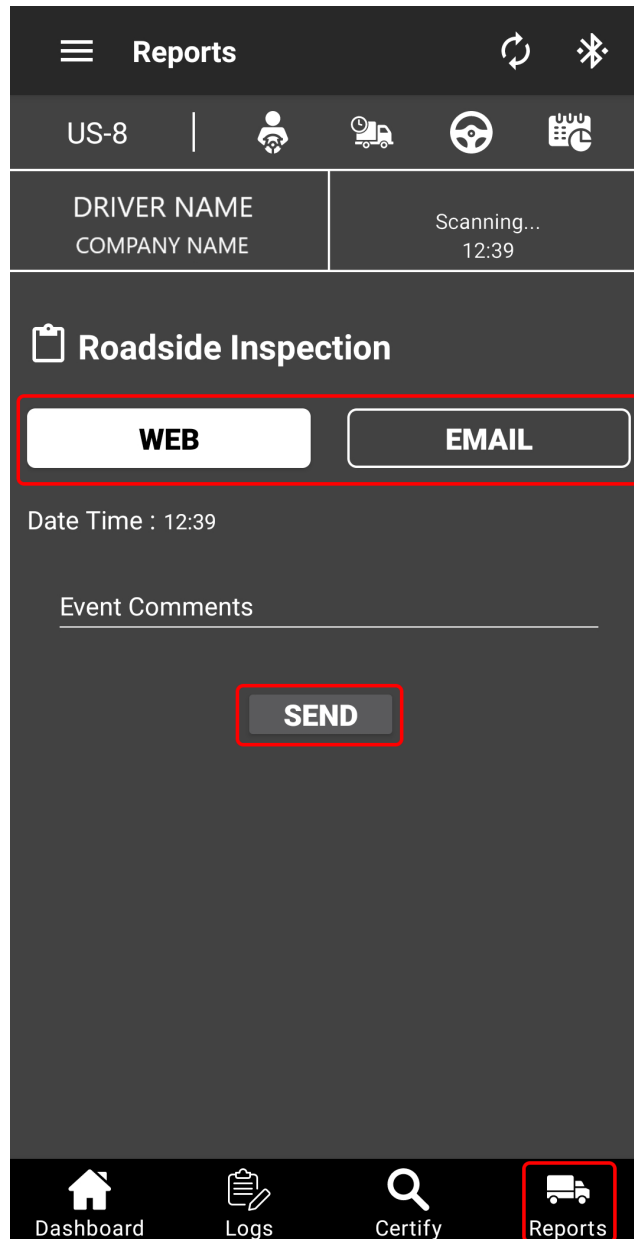

Your HOS history can be viewed from the dashboard by clicking the **Logs** button at the bottom of the screen.

In order to switch to previous days just swipe the graph left or right. Your available hours can be viewed by clicking on the violation markers at the top of your screen. The time elapsed since the last duty status can be viewed below the VIN Number.

eRODS Transfer

In order to create an eRODS Transfer click the **Reports** button at the bottom of your screen. Select the appropriate transfer method (Web/Email) and fill the comment field with the code provided by the officer conducting the inspection.

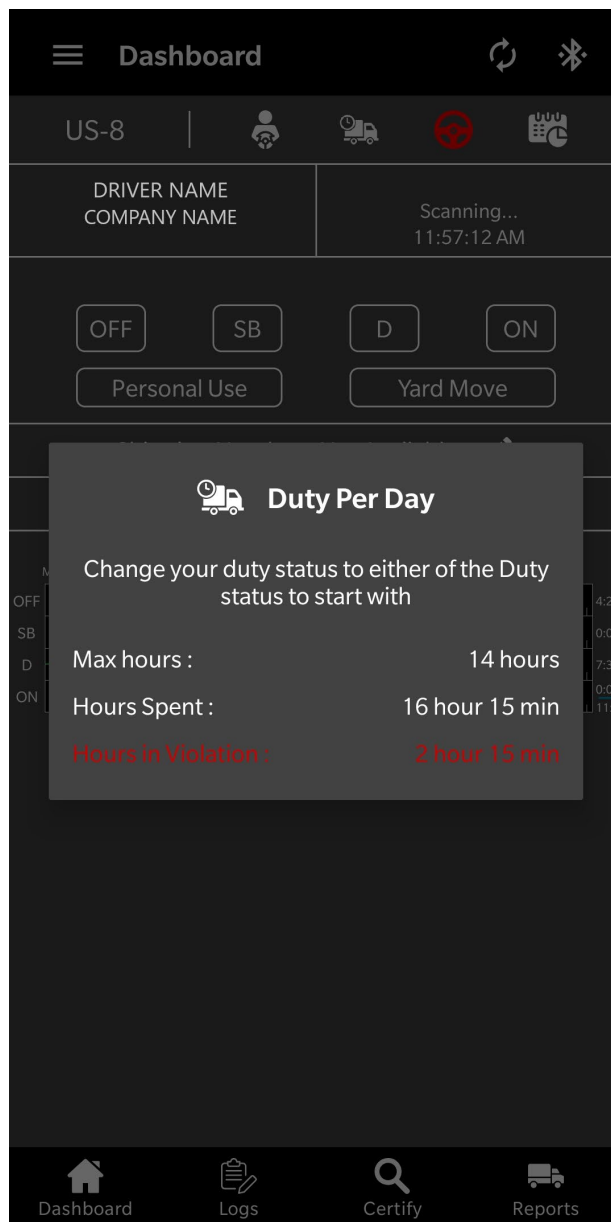

The screenshot shows a mobile application interface for creating an eRODS Transfer. At the top, there is a header with a hamburger menu icon, the word "Reports", a refresh icon, and a Bluetooth icon. Below the header, there is a status bar showing "US-8" and several icons representing different vehicle types. The main content area is divided into sections. The first section contains "DRIVER NAME" and "COMPANY NAME" on the left, and "Scanning..." with the time "12:39" on the right. The second section is titled "Roadside Inspection" and contains two buttons: "WEB" and "EMAIL", both of which are highlighted with a red border. Below these buttons, there is a "Date Time : 12:39" label and an "Event Comments" input field. At the bottom of the main content area, there is a "SEND" button, also highlighted with a red border. The bottom navigation bar contains four icons: a house icon for "Dashboard", a clipboard icon for "Logs", a magnifying glass icon for "Certify", and a truck icon for "Reports", which is highlighted with a red border.

Other Features

Violation Tracking & Warnings

The application will automatically detect HOS violations ahead of time and warn the user as such through a notification and popup on the dashboard.

If the user is in violation the appropriate status icons will be flashing, and the user will be warned of the active violation(s) when switching to another duty status.

Malfunction Reporting

If an ELD malfunction occurs, the driver must:

1. Note the malfunction of the ELD device and provide a written notice of the malfunction to the motor carrier within 24 hours;
2. Reconstruct the record of duty status (RODS) for the current 24-hour period and the previous 7 consecutive days, and record the RODS on graph-grid paper logs, or electronic logging software that comply with **49 CFR 395.8**, unless the driver already has the records or retrieves them from the ELD; and
3. Continue to manually prepare RODS in accordance with **49 CFR 395.8**, until the ELD is serviced and back in compliance. The recording of driver's hours of service on paper log, or electronic logging software, cannot continue for more than 8 days after the malfunction; a driver that continues to record his or her hours of service on paper log, or logging software beyond 8 days risks being placed out of service.

If an ELD malfunction occurs, the motor carrier must:

1. Correct, repair, replace, or service the malfunctioning ELD within eight days of discovering the condition or a driver's notification to the motor carrier, whichever occurs first; and
2. Require the driver to maintain paper record of duty status (RODS) until the ELD is back in service.

Frequently asked questions

What transfer method should I select when creating an eRODS transfer?

Choose the transfer method as advised by the officer conducting the inspection.

The indicator icons are flashing red.

If the indicator icons are flashing red this means that the application is unable to connect to the ELD device. Please ensure that the device is connected properly and running, and that you are within range of the device. If this does not resolve the issue, please follow the **Malfunction Reporting** instructions.
