Installation

Look for 9-or 6-pin circular ports in heavy-duty vehicles or an OBDII port in light or medium-duty vehicles. That is the vehicle's ECM (diagnostic) port.

Use the provided cable to connect the device to the ECM (diagnostic) port. You can mount the device on the dashboard.

On your mobile device, download the logbook app and sign in with the username and password created and provided to you by a fleet manager.

You will see a list of vehicles (previously created by a fleet manager). Select your vehicle and the app will connect to the device via Bluetooth.

Hours of Service Records

Once you have signed into the app and chosen the vehicle, you will have access to the following information:

Status

You can view your current status and change it in accordance with your activity.

Remaining time until the next shift and cycle

The app calculates the amount of time needed to start a new shift or cycle. When a new shift or 70/8 period begins a visible signal will appear.

Logs Information

Per DOT regulations, logs information includes: a paperlike graph-grid and a list of status events. Logs from different dates can be viewed navigating with the < > buttons through the preview screen.

Graph-grid

Shows the driver's statuses throughout a 24-hour period.

Status events

Each status change and duration is registered. Tap on any status to view annotations, vehicle details, shipping document number, and other additional information.

Driver details

View driver's status as well as contact info, license number, current cycle, carrier, and location.

Manage Statuses

Driving time cannot be changed and statuses cannot be deleted. However, you can edit statuses on your app.

Any edits made to a log that has been certified will rescind the certification; the driver will be required to certify the log again.

The system will send a notification if an edit results in an HOS violation. The edit will be saved nonetheless.

Online Portal

Driving Availability

View real-time data on each driver's duty status and remaining or reset hours.

HOS Violations

Receive notifications about HOS violations. All violations are archived and the records can be accessed by the fleet manager.

Driver Information

View current or last location and vehicle driven for each driver, as well as their contact information.

Vehicle Information

Click on a vehicle ID to see its latest history and check shipping document numbers.

Download Logs

Download any driver's logs in PDF format in just a few seconds.

Transfer Logs

In case of a roadside inspection, the fleet manager can send logs to an FMCSA officer from the online portal.

Filter Logs

Find logs by date, driver, vehicle or date to save time.

Preconfigured Statuses

Managers can set Yard Move and Personal Use as valid duty statuses.
